There is a dilemma known as plagiarism, and it can be beaten! It is important to know how to avoid this unfortunate circumstance. That's why we compiled this blog post on plagiarism detection software errors and how to spot them, as well as how you might be able to use the internet's resources to help yourself. As students, we've all been there: you spend hours upon hours on your essay or exam answer only for it all come crashing down when you find out that what you wrote was actually somebody else's words. The worst part about it is the amount of time wasted on something that wasn't yours and that has no real meaning (except maybe the negative meaning of getting caught). If you don't want this to happen to you, here are some of the most common plagiarism detection software errors. One of the most common error is the failure to use quotation marks or using quotation marks incorrectly. Rather than using " or ' symbols, you must use " and " symbols for footnotes and endnotes. These two pairs of symbols are not interchangeable, so make sure you're using the correct ones. Another mistake many make is not putting a proper title on a source. This means you must include a work's last name and first initial, as well as the year it was published. Something like "The Origins of Western Civilisation In Ancient Egypt by Howard Williams" would be incorrect because the date may be different from the one you see. The most common thing that can go wrong with your documents, however, is using words from someone else's document not as they were used in their own but as they were used in their original work. This is known as paraphrasing someone else's words or ideas and it happens a lot on college text reports or essays. There are a lot of ways to avoid these common errors in your documents. First, make sure you put in all the information in the proper order. Second, make sure you cite or reference all your work properly and in a way that is easy to find. Lastly, read over what you have written from start to finish and look for anything that might be confusing or lose meaning from being taken out of context. The last thing you want is to get caught with plagiarism detection software errors. These mistakes are easily avoidable if you just take the time to read over your work before submission. Here is a link to the website where you can learn more about this topic. http://www.ehow.com/how_8508003_proof-plagiarism-detection-software.html Title:Related Articles: How To Avoid Plagiarism Detection Software Error?
